SUMMARY

Full Stack Developer with 4+ years of experience building web applications with React, Next.js, Node.js, and TypeScript. Core contributor to JAD, an internal platform and framework powering 6+ client products in production. Central role in cloud migrations (GCP VMs to Cloud Run, Cloud SQL, and Firebase Hosting) and in defining the standards that keep AI-assisted engineering predictable — cutting delivery of new features and fixes from days to hours. English C1.

SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, TailwindCSS, Shadcn/UI, Zustand

Backend: Node.js, Express, REST APIs, PostgreSQL, MySQL, Kysely

Cloud: Google Cloud (Cloud Run, Cloud SQL, Cloud Storage, VPC), Firebase Hosting

DevOps: Docker, CI/CD (GitHub Actions), AI-assisted automated testing, Git, Linux

Practices: Software architecture, requirements analysis, AI-assisted engineering standards, legacy modernization

Languages: English (C1), Spanish (native)

EXPERIENCE

Full Stack Developer

03/2022 – Present

Baleares Group · Remote

- Core contributor to JAD, the company's internal platform and framework, taking part in central product and architecture decisions from its foundations — today it powers 6+ client products in production and sets the team's reference architecture.
- Migrated 100% of client legacy systems onto JAD — 6 clients in under a month — working hand-in-hand with clients and bringing their systems back to a maintainable, evolvable state.
- Helped drive AI adoption across the engineering team: defined the rules AI-generated code must follow, documented the quality processes that keep agentic workflows predictable, and integrated AI-assisted automated testing into the deployment pipeline.
- Played a central role in migrating backend services from GCP virtual machines to Cloud Run and Cloud SQL, and every frontend from Apache-based VMs to Firebase Hosting — isolating environments, automating deployments, and reducing operational costs.
- Standardized the team's delivery process, cutting turnaround for new features and bug fixes from days to hours, and client demo delivery from weeks to days.
- Partnered directly with the CEO and CTO to define technical guidelines and architectures for client projects.

PROJECTS

SaaS Starter

Next.js · TypeScript · Kysely · Neon Postgres · Auth.js · Stripe · Vercel

Production-ready starter for modern SaaS products: OAuth authentication (Google, Auth0, GitHub), secure session handling, scalable API structure, transactional emails with React Email + Resend, and clean deployment pipelines.
