SUMMARY

Full Stack Developer with 4+ years building web and mobile applications with React, Next.js, React Native, Node.js, and TypeScript. Core contributor to JAD, an internal platform powering 6+ client products in production. I work with Claude Code every day and built the quality gates that make AI-written code safe to ship: features go out in hours, not days. Central part in our cloud migrations to Cloud Run, Cloud SQL, and Firebase Hosting. English C1.

SKILLS

Frontend & Mobile: React, Next.js, TypeScript, JavaScript, React Native, Expo, TailwindCSS, Shadcn/UI, Zustand

AI & Automation: Claude Code (daily), AI-driven development workflows, AI code governance, agentic pipelines, AI-assisted automated testing

Backend: Node.js, Express, REST APIs, PostgreSQL, MySQL, Kysely

Cloud: Google Cloud (Cloud Run, Cloud SQL, Cloud Storage, VPC), Firebase Hosting

DevOps: Docker, CI/CD (GitHub Actions), Git, Linux

Practices: Software architecture, requirements analysis, legacy modernization

Languages: English (C1), Spanish (native)

EXPERIENCE

Full Stack Developer

03/2022 – Present

Baleares Group · Remote

- Core contributor to JAD, the company's internal platform, in on its product and architecture decisions since the foundations. Today it powers 6+ client products in production.
- Migrated all 6 client legacy systems onto JAD in under a month, working directly with each client. One was a legacy mobile app I moved to React Native (Expo) on my own in four days.
- Drove AI adoption on the engineering team: wrote the rules AI-generated code has to follow and built the automated quality gate that enforces them, 10+ checks wired into our definition of done.
- Moved our backend services from GCP virtual machines to Cloud Run and Cloud SQL, and every frontend from Apache VMs to Firebase Hosting. Isolated environments, automated deployments, lower operating costs.
- Standardized the delivery process. New features and bug fixes now ship in hours instead of days; client demos in days instead of weeks.
- Worked directly with the CEO and CTO on technical guidelines and architectures for client projects.

PROJECTS

SaaS Starter

Next.js · TypeScript · Kysely · Neon Postgres · Auth.js · Stripe · Vercel

Production-ready starter for modern SaaS products: OAuth authentication (Google, Auth0, GitHub), secure session handling, scalable API structure, transactional emails with React Email + Resend, and clean deployment pipelines.
